

## Setting up my slide show.

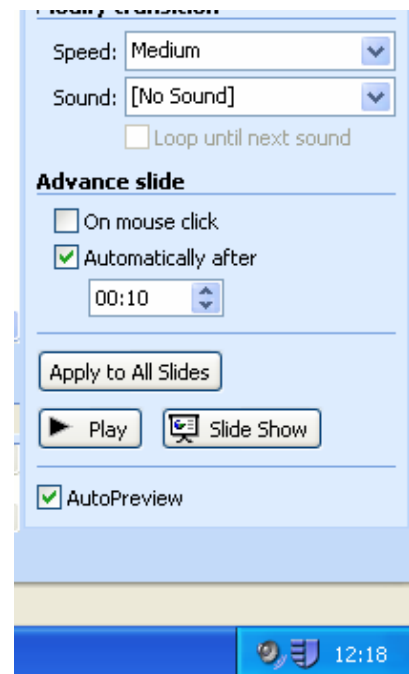

**I changed the show options to 'loop continuously until Esc'**

**This makes my slide show replay over and over until the escape button is pressed on the keyboard.**

**On slide transition, I selected the box which says automatically after. This allows the slide to play by itself without the need of clicking the mouse.**

**This makes it easier to use as people don't have to worry about playing it manually.**

**I also added timings to the slide show to ensure that the reader has enough time to read the publication.**

**I added custom animations to my publication. This makes all of the writing and pictures appear on the slide at different times.**

**Using custom animation I added effects to make the different parts on the slide appear in different ways E.g Fly in.**
