

Creating Test Buddy's Playlist

Here are the results my test buddy got on my quiz.

Music Preferences: AT & RP

Effort Rating:M

Then, like I did for my own

playlist I used my database that I had created.

I created another query,

with the same information in my own query except I only entered RP for genre.

I only came up with these songs, and when I created a formula to sum the minutes, the playlist only came to 10 minutes.

Field:	Title	Genre	Artist	Length(Seconds)	Effort F
Table:	Table1	Table1	Table1	Table1	Table1
Sort:					
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
Criteria:		"RP"		<200	"M"
nr:					

Playlength:

10.2

=Sum([Length(Seconds)])
760

Then, because the playlist was a lot less than 15 minutes, I went back to my query and changed the time in seconds to less than 201.

Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:	"RP"		<201

These are the songs that if found which met the fields specified.

Title	Genre	Artist	Length(Seconds)	Effort Rating
▶ Jump In My Car	RP	David Hasselhoff	175	M
▶ We Belong Together	RP	Mariah Carey	200	M
▶ Don't Panic	RP	Coldplay	137	M
▶ Enter The Circus	RP	Christina Aguilera	102	M
▶ Something Kinda Oooh	RP	Girls Aloud	198	M
*			0	

I then went onto the report and it calculated a total playtime of 13.5

Lastly, to make his report more attractive, I used the same layout and alterations to his report as I did to mine. Below is a screenshot of his report before it has been evaluated or improved.
