

# Slide Set-up

On my On screen publication I had to loop my set-up as it would theoretically be shown in a walkway or reception and needs to be automatic and continuous.

I also had to go onto Slide Transitions to make each slide timed which I had to test how long each slide took to read. I also had to select my custom animation to run automatically without clicking as then it could be left unattended but people would be able to watch it.

To make my On screen publication both more attractive and appealing, I had to include a range of custom animations. This would attract more people to watch it, and also help to persuade them either to attend or sponsor a dancer.
